

Extract Once, Judge Many - Q4 Infrastructure Report

Document ID: DOC-99482

Date: November 2026

--- SECTION 1: INGESTION BOTTLENECKS ---

Over the past quarter, we have seen significant bottlenecks in the data ingestion phase. Tony has proposed moving to a distributed architecture to handle the load. The current single-node setup is failing when we attempt to process more than 500 PDFs per hour.

--- SECTION 2: COMPLIANCE AND OCR ---

In terms of compliance, Marten noted a critical issue during the Tuesday review.

Exactly 15% of our scanned PDF documents are failing the OCR (Optical Character Recognition) pipeline

because of low DPI scans from the legacy branch offices. We must address this before scaling the pipeline to the European division.

--- SECTION 3: BUDGET ALLOCATION ---

Jaymin is leading the budget review for these necessary infrastructure upgrades.

The estimated cost for Q1 scaling will be approximately \$45,000. Because this exceeds the standard departmental threshold, it will require VP approval by Friday.
